Bullet-resistant guard booths

provide unmatched protection—and keep unwanted visitors out!

Bullet-Resistant Booths

Bio-Terrorism Booths

Conventional Booths

Fully Assembled & Pre-Wired

Built to Customer Specifications

Delta Scientific manufactures a variety of guard booths, from high-tech anti-ballistic models to standard parking kiosks.

Delta's **high security booths** are already used at border stations, federal and state buildings, military bases and other areas where there is a high need to keep unauthorized visitors out. **Bullet-resistant** booths can be specified as Level 1, 2, 3 or 4, with 4 providing the highest level of resistance. Our bullet-resistant booths are tested and certified to conform to Underwriters Laboratories standard UL 752 and others as required.

We offer multiple booth configurations, including standard, high security, round, glass-to-glass, simple shelters, and custom designs. All booths are built to your specifications, equipped with a wide range of options.

Why are Delta guard booths the *de facto* solution?

It's a fact that over 12,000 systems worldwide are protected by Delta systems. These include U.S. embassies, nuclear plants, banks, manufacturing facilities, military bases, courthouses, private companies, major airports, car and rental lots, logistics centers, palaces, private residences and many more. For many years, Delta systems have been protecting some of the most important people and facilities in the world.

Since 1974, Delta has been producing products and systems that promote safety and security for people and property.

Our staff is knowledgeable and experienced.

Delta has been the leader in using Finite Element Analysis to study vehicle collisions with fixed and moveable barriers. With our database of full-scale test results, we have superb computer models that enable us to test new designs at our desktops. We're able to analyze unique situations and design products that will meet your special needs.

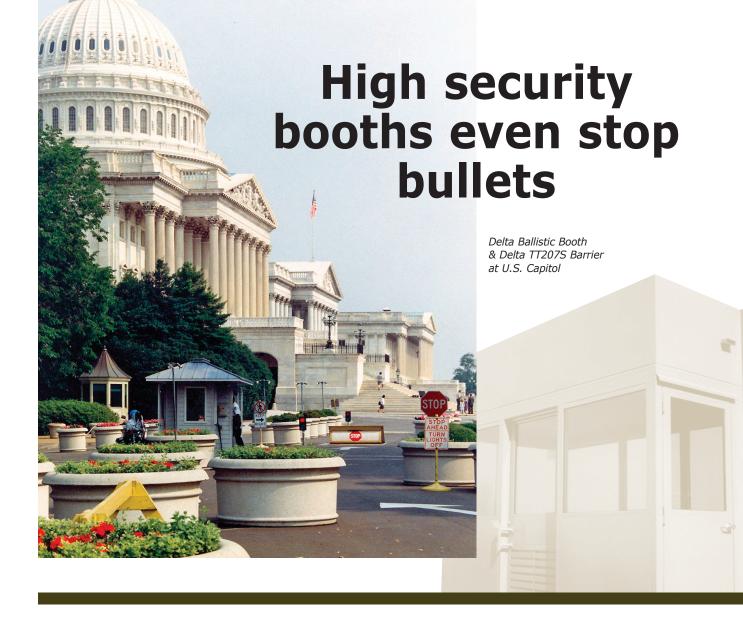

Mail Screening Security **BioBooth**

Self-contained, prefabricated, pre-wired and UL-listed, the BioBooth mail screening booth has been designed for inspectors to safely receive and open mail—isolating the rest of the staff and facility from exposure if bio-hazards are delivered.

The Mail Room Inspection BioBooth is typically installed outside of a main building or inside a shipping and receiving warehouse. When attacked by biological hazards, facilities such as post offices will no longer face a lengthy closure. Upon discovering contaminated mail, the BioBooth can be sealed, quickly unbolted and safely removed from public areas for decontamination.

Delta's Mail Room Inspection BioBooths feature outer and inner workrooms with sealed doors, lighting and hospital-style floors. Each room has long countertops and open spaces for staging, sorting and prospective decontamination. A bench top-mounted HEPA-filtered laboratory hood with UV sterilization is pre-installed and may be flexibly positioned to isolate and protect the inspector opening packages. The booths have controllable drainage and an internal wash-down hose bib. An optional sub-floor basin catches the contaminated liquid for removal through a valve into a disposal container.

The units fit into sea-going open top shipping containers and are available in a wide range of national and international voltages. Both standard and custom size BioBooths are available.

Guard Booths–

From Simply Shelter to Highly Secure

The standard Delta booth solves project headaches. Our standard booth is offered in two different sizes to fit the typical location. They are designed to provide protection from the changing environment and to offer security to your facility.

Beyond high security and standard booths, Delta offers many other types of booths and shelters to fit a variety of needs and locations.

Round Booths

There are areas where the typical square design will not work. With full round or half-round buildings, you can conform to the island design, giving a full view with no corner post interruptions. These rounded buildings come with swing or sliding doors.

unwanted guests?

Delta Scientific bullet-resistant Level 4 booths currently protect the Pentagon. But you don't have to be the Pentagon to take advantage of the high security offered by a Delta bullet-resistance guard booth. These high security booths are used for applications ranging from California's Ontario Airport to entrances for private

security, bullet-resistant booths are prewired to N.E.C. (125 AMP, 120/240 Volt, 6/12 station, single phase) and come fully assembled, ready for service.

companies needing extra security. Delta's high

Border stations, federal & state buildings, military bases—including those that protect our troops in the MidEast—and areas where there can be a "very unwanted guest" use Delta high security booths. Bullet Resistant Level 1, 2, 3 and 4 buildings are available for high security applications.

Sometimes, though, booths must protect against more common elements than bullets.

BALLISTICS LEVEL	GUN TYPE	GUN EXAMPLE
1	Handgun- Medium Power	9mm/Super .38
2	Handgun- High Power	.357 Magnum
3	Handgun- Super Power	.44 Magnum
4	High Power Rifle	30-06
5	Military Ball/Full Metal Copper Jacket	.308 Winchester/ Military Rifle
6	Multiple Shots/ Submarine Gun	9 mm Uzi
7	Multiple Shots/ Military Assault Rifle	M-16
8	Multiple Shots/ Military Assault Rifle	M-14

Pre-wired to meet local code, Delta round booths come fully assembled, ready to use.

Glass-to-Glass Corner Booths

Glass-to-glass corners can maximize your work area to its full potential. The glass-to-glass corners with

polished edges are sealed with clear silicone for water tightness. This 360-degree view offers a nice clean look with no corner post.

Pre-wired to meet local code, Delta glass to glass corner booths are fully assembled and ready for service.

Shelter Guard Booths

Delta shelters are a perfect solution for the customer waiting for a bus, rental car or other services. These fully assembled, ready to use Bus Shelters are attractive and functional. They are also simple to use. Simply place them into position and anchor them to the pad.

We provide them with an electrical "J" box for power connection, lights, skylights, benches and program schedule boxes, as required.

For example, the Minneapolis/St. Paul International Airport required 18 new parking cashier booths to handle its doubled parking capacity. To architecturally

complement the new parking structure, the booths feature rounded corners and custom paint design. To guard against the Minnesota winters, each booth features two heaters and double insulation. Glass can be tinted to eliminate sun glare.

Delta created and installed 50 custom-design bullet-resistant guard booths, along with other equipment, for the refurbishment of the San Ysidro Landed Port of Entry (SYLPOE), the busiest land port in the world. The stacked bullet-resistant inspection booths effectively double the capacity of the 24 existing booths. The highly energyefficient structures have a photovoltaic and Ethylene Tetrafluoroethylene (ETFE) roof structure that will shade cars and officers. It also provides for rain and sun protection

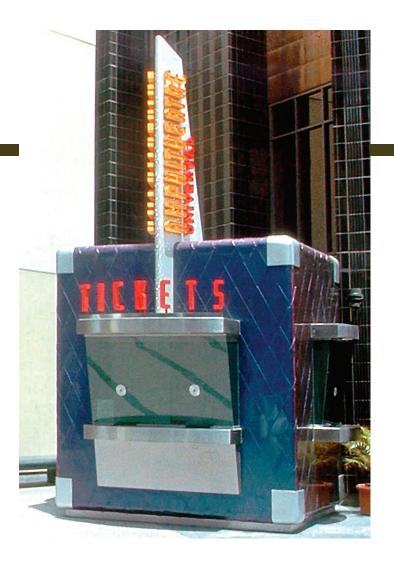

> for the officers in booths. Because of its translucent nature, it allows for natural light thereby requiring no artificial lighting during the day.

Delta Scientific can manufacture a guard booth that meets your specific needs and requirements, too.

It's just one example of creating exactly what a customer needs.

Although typically pre-fabricated, every booth is composed of a series of options. For instance, the roof can be extended with a flat band, extended overhead, have skylights or be of a hip type with a standing seam. Flooring can be of steel or aluminum diamond plate, be indoor or outdoor carpeted, have forklift sockets or be provided with vinyl coating. Insulation can be to R-19. There are choices to make on doors and windows. Is shelving needed? Do you need a bathroom? In many ways, you are designing a small building.

Delta Scientific Corporation is the leading worldwide manufacturer of vehicle access control equipment with over 260,000 square feet of production facilities in Palmdale, CA. Delta's three product lines consist of high-security vehicle barricade systems, parking control equipment and guard booths.
