

Crash-Rated Portable Beam Barricade

M30 Certified DSC1500 Creates 16 ft (4.8 m) Road Closure in 10 Minutes

Delta Scientific's DSC1500 portable beam barricade sets up quickly and temporarily to block vehicles. The portable barricade secures locations during short-term events anywhere a beam barricade is needed for interim security. With a clear opening of 16 feet (4.8 m), the DSC1500 is M30 certified, able to stop a 15,000 pound (66.7 kN) vehicle going 30 mph (48 kph).

Many organizations have the need for easy-to-install, temporary drop-arm barriers that can install within 10 minutes to temporarily close down a roadway to one or two lanes or block parking lot exits to deter thefts. Previous beam barriers had to be filled with sand, gravel or cement to be operable. To remove the DSC1500 from its temporary site, it is simply repacked in 10 minutes.

Block Roads & Access Points in Only *10 Minutes!*

The DSC1500 tows into position to control vehicle access within ten minutes. No excavation or sub-surface preparation is required. Once positioned, a self-deploying trailer with integrated lifting device facilitates rapid installation. The mobile barricade unpacks itself using manual

hydraulics to raise and lower the barriers off their wheels. The process is simply reversed when the event is over or the time comes to deploy the beam barrier at another location.

From a purchasing standpoint, it can be easier to buy portable beam barricades than permanent solutions. The latter are often times placed into an organization's real assets budget because they are permanently installed into the ground, becoming part of the property. Such budgets can often create complex purchasing scenarios for law enforcement or public safety departments. However, purchasing portable beam barricades is no different than buying new sets of wrenches for the maintenance department.

For one time uses, a lease plan has been created where organizations can simply lease the portable barriers, use them, pack them up and return them. Delta always keeps an inventory for purchase and quick delivery at their manufacturing facility in Palmdale, Calif. That's because, in many cases, they are needed for events that come up quickly, such as emergency road or bridge construction or unexpected parking lot requirements.

Delta Scientific Corporation is the leading worldwide manufacturer of vehicle access control equipment with over 260,000 square feet of production facilities in Palmdale, CA. Delta's three product lines consist of high-security vehicle barricade systems, parking control equipment and guard booths.
